

Coir Umbrella

In order to reform the existing Coir felt further and increase the usage bandwidth, Coir Board has tried to address the water resistant problem in the product. For this CCRI successfully developed an umbrella with the combination of i.e. Nylon + Coir felt + Cotton gauze. An Umbrella has been made with these sheets with stainless steel frame. This combination sheet will work as:

- Nylon acts as water resistant layer
- Coir acts as UV protection layer
- Gauze acts as reinforcing layer for fibers
